

TECHNIC - price list 2018

Technic construction system looks rough in terms of its appearance and design but is a technologically modern product offered by the Tarasola company. Its roof comprises of aluminium battens which can be turned through 135 degrees. Thanks to the smooth adjustment of the slats' inclination angle users can fully control the sunlight, allowing natural free air circulation and ventilation. Solid construction made of aluminium is fully resistant to the extremes of temperature and meteorological factors including strong wind up to 120 km/h as well as snow load up to 120 kg/m². Water is drained off through an integrated guttering system which is hidden in the carrier profiles. Technic Tarasola is powder-coated in all the colours from the RAL colour palette (over 200 colours) as well as one out of 20 wood-grain paintworks with growth rings. It can be upgraded by a wide range of equipment from our catalogue, thanks to which it is possible to achieve an inimitable effect. Spotlights integrated with the fins or LED tapes embedded in the frame enable canopy terraces' users to use them even after dark. Our terrace pergola is an alternative to the winter garden when equipped with glazing, blinds, radiant heaters or water mist diffusers. Thanks to the modular joining of the elements, it is possible to cover an area of any size with our products. As a result, our products are unbeatable and all-year-round.

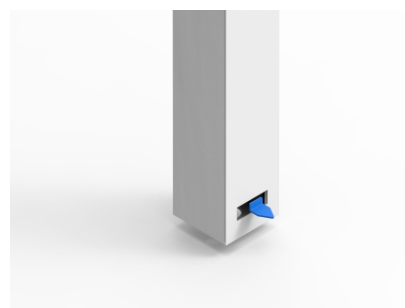

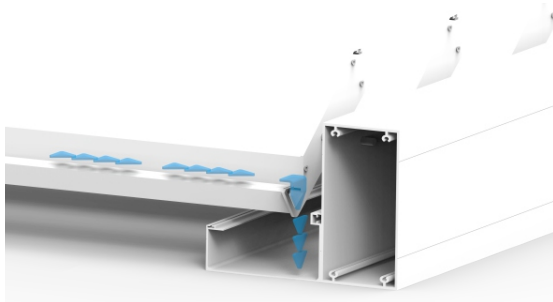

SPECIFICATION

The structure is made of extruded aluminum and stainless steel
 Control of the electric motor as standard
 Water drainage system as standard
 Possibility of powder coating in any RAL colour
 Rotation of the roof panels in the range from 0° to 135°
 Modular connection option
 Product with maximum dimensions resistant to loads of snow up to 120 kg/m² with simultaneous strong wind up to 80km/h.

Option of selecting additional equipment:

- lighting - LED points or LED strip
- glazing
- screener blinds
- radiant heaters
